

# CHAPTER 11

## Economic Analysis of Banking Regulation

---

---

---

---

---

---

---

---

## How Asymmetric Information Explains Banking Regulation

### 1. Government Safety Net and Deposit Insurance

- A. Prevents bank runs due to asymmetric information: depositors can't tell good from bad banks
- B. Creates moral hazard incentives for banks to take on too much risk
- C. Creates adverse selection problem of crooks and risk-takers wanting to control banks
- D. Too-Big-to-Fail increases moral hazard incentives for big banks

### 2. Restrictions on Asset Holdings

- A. Reduces moral hazard of too much risk taking

---

---

---

---

---

---

---

---

## How Asymmetric Information Explains Banking Regulation

### 3. Bank Capital Requirements

- A. Reduces moral hazard: banks have more to lose when have higher capital
- B. Higher capital means more collateral for FDIC

### 4. Bank Supervision: Chartering and Examination

- A. Reduces adverse selection problem of risk takers or crooks owning banks
- B. Reduces moral hazard by preventing risky activities

### 5. New Trend: Assessment of Risk Management

### 6. Disclosure Requirements

- A. Better information reduces asymmetric information problem

## Why a Banking Crisis in 1980s?

### Early Stages

1. Decreasing profitability: banks take risk to keep profits up
2. Deregulation in 1980 and 1982, more opportunities for risk taking
3. Innovation of brokered deposits enabled circumvention of \$100,000 insurance limit
4.  $\pi \uparrow$ ,  $i \uparrow$ , net worth of S&Ls  $\downarrow$ 
  - A. Insolvencies  $\uparrow$
  - B. Incentives for risk taking  $\uparrow$

**Result:** Failures  $\uparrow$  and risky loans  $\uparrow$

### Later Stages: Regulatory Forbearance

1. Regulators allow insolvent S&Ls to operate because
  - A. Insufficient funds
  - B. Sweep problems under rug
  - C. FHLBB cozy with S&Ls
2. Huge increase in moral hazard for zombie S&Ls: now have incentive to "bet the bank"
3. Zombies hurt healthy S&Ls
  - A. Raise cost of funds
  - B. Lower loan rates
4. Outcome: Huge losses

## Political Economy of S&L Crisis

### Explanation: Principal-Agent Problem

1. Politicians influenced by S&L lobbyists rather than public
  - A. Deny funds to close S&Ls
  - B. Legislation to relax restrictions on S&Ls
  - C. Competitive Bank Equality Act (CEBA) of 1987 had inadequate amount for bailout
2. Regulators influenced by politicians and desire to avoid blame
  - A. Loosened capital requirements
  - B. Regulatory forbearance

---

---

## Financial Institutions Reform, Recovery and Enforcement Act (FIRREA) of 1989

1. New regulatory structure: Office of Thrift Supervision as new regulator, FDIC takes over FSLIC fund
2. Resolution Trust Corporation (RTC) created and given funds to close insolvent S&Ls: cost of \$100-\$200 billion
3. Core capital requirement ↑ from 3% to 8%
4. Reregulation: Asset restrictions like before 1982

---

---

---

---

---

---

---

---

## Federal Deposit Insurance Corporation Improvement Act (FDICIA) of 1991

1. FDIC recapitalized with loans and higher premiums
2. Reduce scope of deposit insurance and too-big-to-fail
3. Prompt corrective action provisions
4. Risk-based premiums
5. Annual examinations and stricter reporting
6. Enhances Fed powers to regulate international banking

---

---

---

## Cost of Banking Crises in Other Countries

**Table 2 The Cost of Rescuing Banks in Several Countries**

Date	Country	Cost as a % of GDP
1980-1982	Argentina	55
1997-ongoing	Indonesia	50
1981-1983	Chile	41
1997-ongoing	Thailand	33
1997-ongoing	South Korea	27
1997-ongoing	Malaysia	16
1994-1997	Venezuela	22
1995	Mexico	19
1990-ongoing	Japan	20
1989-1991	Czech Republic	12
1991-1994	Finland	11
1991-1995	Hungary	10
1994-1996	Brazil	13
1987-1993	Norway	8
1998	Russia	5-7
1991-1994	Sweden	4
1984-1991	United States	3
